Hundreds of Beautiful Design Ideas

RIGHT Staying true to its origins, this design collected all its ideas from the past, then, without great expense, polished them for maximum storage and light. The cabinet on the left was purchased unfinished, painted by the homeowner, and detailed with reproduction hardware. The small stained-glass panel makes a beautiful design statement at a fraction of the cost of a full window.

- **Make choices that work overtime.** A decorative chest at the foot of the bed is not only pretty to look at; it can also store small suitcases and give you a place to sit and tie your shoes. Plants at the window soften your decor, screen the natural light, and provide sheltering privacy. A cabinet for extra blankets that also houses a pop-up TV can serve as a room divider as well. Whenever one design element can perform a double function, the only thing for you to figure out is how it can perform a third!
